

Project Initialization and Planning Phase

Date	15 July 2026
Team ID	TM-RISINGWATERS-04
Project Name	Rising Waters: AI Powered Flood Prediction System
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template):

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love. A well-articulated customer problem statement allows you and your team to find the ideal solution for your customers' challenges. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A local disaster management officer in a flood-prone district.	Deploy accurate, early community warning maps and initiate target evacuations before high monsoon rains hit.	Existing weather prediction systems lack localized, hyper-targeted precipitation risk classification indices.	Traditional forecasting models do not integrate fast ML-driven correlation mapping of historical rain metrics.	Anxious and vulnerable regarding critical public safety decisions.
PS-2	A commercial farmer operating crops near a major river basin.	Determine safe harvest timelines and safeguard assets against seasonal crop waterlogging damage.	I have no access to intuitive predictive tools that convert rain data into direct localized flood risks.	Most official meteorological reports rely on complex meteorological telemetry instead of accessible web-based layouts.	Helpless and financially insecure about potentially losing entire seasonal yields.
