

Define Problem Statement

Date: 08 July 2026

Project Name: Rising Waters – Flood Prediction System

Maximum Marks: 3

Problem Statement ID: PS-1

I am:

A Disaster Management Officer responsible for monitoring flood-prone regions.

I'm trying to:

Predict floods early using historical weather and rainfall data.

But:

Existing flood prediction methods often provide inaccurate or delayed warnings.

Because:

Late flood predictions increase the risk of loss of life, property damage, and delayed emergency response.

Which makes me feel:

Concerned about protecting communities and improving disaster preparedness.
